Release 0.1.4

Simó Albert i Beltran

August 29, 2016

1 BankBarcode	3
2 Backend	5
2.1 pyBarcode	5
2.2 Why not another backend?	5
3 API	7
4 Indices and tables	11
Python Module Index	13

Release v0.1.4

Contents:

BankBarcode

Python library to generate barcodes for financial documents

Currently only the following codes are implemented:

- *cuaderno57*, Cobros por ventanilla y autoservicio, serie normas y procedimientos bancarios, No57, Enero 2001
 - Recibo507, Recibos y otros (Cobros por Ventanilla y Autoservicio, V2001)

Feel free to implement more.

```
from bankbarcode.cuaderno57 import Recibo507
entity = '01234567'
suffix = '023'
ref = '12345678901'
notice = '123456'
amount = '6543.21'

recibo507 = Recibo507(entity, suffix, ref, notice, amount)

# get checksum value
checksum = recibo507.checksum()

# save barcode as /tmp/mybarcode.svg
provided_filename = '/tmp/mybarcode.svg'
generated_filename = recibo507.save(provided_filename)

# get a string with the barcode in SVG format
svg = recibo507.svg()
```

Read the documentation at <http://bankbarcode.readthedocs.org>

BankBarcode uses pyBarcode to generate the barcodes.

2.1 pyBarcode

pyBarcode generates barcodes with Code128 (EAN128) since v0.8b1.

<https://bitbucket.org/whitie/python-barcode>

2.2 Why not another backend?

2.2.1 python-code128

python-code128 needs python3.

<https://bitbucket.org/01100101/code128/overview/>

2.2.2 reportlab

reportlab can generate barcodes with code128 but it only creates PDF documents.

<http://www.reportlab.com>

class `bankbarcode.bankbarcode.BankBarcode`

Base class for barcodes

`__weakref__`

list of weak references to the object (if defined)

`_check_length` (*name, value, expected_length, description*)

Check length of a value.

Parameters

- **name** – name of the value
- **value** – the value itself
- **expected_length** – the expected length of the value
- **description** – definition of the expected value

Returns True if value have the expected length, otherwise False

`code` ()

Code generation. To implement in child classes

`save` (*path, writer_options=None*)

Save barcode in SVG format.

Parameters

- **path** – path to SVG file with or without ".svg" extension
- **writer_options** – Common options from `pyBarcode`
<http://pythonhosted.org/pyBarcode/writers/index.html?#common-options>

Returns a string with the name of the file generated

`svg` (*writer_options=None*)

Generate a SVG with the barcode.

Parameters **writer_options** – Common options from `pyBarcode`
<http://pythonhosted.org/pyBarcode/writers/index.html?#common-options>

Returns a string with the barcode in SVG format

class `bankbarcode.cuaderno57.Recibo`

Base class for receipts (recibos) of Cobros por ventanilla y autoservicio, serie normas y procedimientos bancarios, No57, Enero 2001

`_check_amount` (*amount*)

Check the amount (Importe)

Parameters `amount` – the amount (Importe)

Returns True if it have the expected length, otherwise False

`_check_due_date` (*due_date, suffix*)

Check due date (Fecha limite) and suffix

Parameters `due_date` – Due Date (Fecha limite)

Returns True if due date is a Datetime or string with format ‘%Y-%m-%d’ and suffix bigger than 499, otherwise False

`_check_entity` (*value*)

Check entity code (Número de la sociedad emisora)

Parameters `value` – the entity code (Número de la sociedad emisora)

Returns True if it have the expected length, otherwise False

`_check_notice` (*value*)

Check the notice identification code (Identificación)

Parameters `value` – the notice identification code (Identificación)

Returns True if it have the expected length, otherwise False

`_check_ref` (*value*)

Check the reference code (Número de referencia)

Parameters `value` – the reference code (Número de referencia)

Returns True if it have the expected length, otherwise False

`_check_suffix` (*value*)

Check the suffix code (Sufijo)

Parameters `value` – the suffix of the entity (Sufijo)

Returns True if it have the expected length, otherwise False

class `bankbarcode.cuaderno57.Recibo507` (*entity=None, suffix=None, ref=None, notice=None, amount=None, due_date=None*)

Receipt (Recibo) 507 for Recibos y otros (Cobros por Ventanilla y Autoservicio, V2001)

`__init__` (*entity=None, suffix=None, ref=None, notice=None, amount=None, due_date=None*)

Create and object of Recibo507 with checked values.

Parameters

- **entity** – the entity code (Número de la sociedad emisora)
- **suffix** – the suffix of the entity (Sufijo)
- **ref** – the reference code (Número de referencia)
- **notice** – the notice identification code (Identificación)
- **amount** – the amount (Importe)
- **due_date** – Due date (Fecha limite)

Returns an object of Recibo507

amount

The amount (Importe)

Returns the amount (Importe) as a string with 10 characters

amount100 ()

Remove the decimal point of the amount (Importe)

Returns the amount (Importe) as a unicode string without decimal point

checksum ()

Generate the checksum (Dígitos de Control) to be added to reference code (Número de referencia)

Returns the checksum (Dígitos de Control) as a unicode string with 2 characters

code ()

Generate the code for the barcode

Returns an unicode string with the code for the barcode

due_date

Due date (Fecha limite)

Returns Datetime with Due date

entity

The entity code (Número de la sociedad emisora)

Returns the entity code (Número de la sociedad emisora) as a string with 8 characters

notice

The notice identification code (Identificación)

Returns the notice identification code (Identificación) as a string with 6 characters

ref

The reference code (Número de referencia)

Returns the reference code (Número de referencia) as a string with 11 characters

suffix

The suffix (Sufijo)

Returns the suffix (Sufijo) as a string with 3 characters

Indices and tables

- `genindex`
- `modindex`
- `search`

b

`bankbarcode.bankbarcode`, 7
`bankbarcode.cuaderno57`, 7

Symbols

__init__() (bankbarcode.cuaderno57.Recibo507 method),
 8
 __weakref__ (bankbarcode.bankbarcode.BankBarcode
 attribute), 7
 _check_amount() (bankbarcode.cuaderno57.Recibo
 method), 7
 _check_due_date() (bankbarcode.cuaderno57.Recibo
 method), 8
 _check_entity() (bankbarcode.cuaderno57.Recibo
 method), 8
 _check_length() (bankbar-
 code.bankbarcode.BankBarcode method),
 7
 _check_notice() (bankbarcode.cuaderno57.Recibo
 method), 8
 _check_ref() (bankbarcode.cuaderno57.Recibo method),
 8
 _check_suffix() (bankbarcode.cuaderno57.Recibo
 method), 8

A

amount (bankbarcode.cuaderno57.Recibo507 attribute), 8
 amount100() (bankbarcode.cuaderno57.Recibo507
 method), 9

B

BankBarcode (class in bankbarcode.bankbarcode), 7
 bankbarcode.bankbarcode (module), 7
 bankbarcode.cuaderno57 (module), 7

C

checksum() (bankbarcode.cuaderno57.Recibo507
 method), 9
 code() (bankbarcode.bankbarcode.BankBarcode
 method), 7
 code() (bankbarcode.cuaderno57.Recibo507 method), 9

D

due_date (bankbarcode.cuaderno57.Recibo507 attribute),
 9

E

entity (bankbarcode.cuaderno57.Recibo507 attribute), 9

N

notice (bankbarcode.cuaderno57.Recibo507 attribute), 9

R

Recibo (class in bankbarcode.cuaderno57), 7
 Recibo507 (class in bankbarcode.cuaderno57), 8
 ref (bankbarcode.cuaderno57.Recibo507 attribute), 9

S

save() (bankbarcode.bankbarcode.BankBarcode method),
 7
 suffix (bankbarcode.cuaderno57.Recibo507 attribute), 9
 svg() (bankbarcode.bankbarcode.BankBarcode method),
 7
